Q1)

Code & Output:

```
1 import streamlit as st
2 from fpdf import FPDF
3 from PIL import Image
4 import base64
5 import os
6 from pygments import highlight
7 from pygments.lexers import PythonLexer
8 from pygments.formatters import ImageFormatter
9
10 formatter = ImageFormatter()
11
12 st.set_page_config(page_title='PDFMaker', page_icon=':memo:', layout='wide')
13
14 with st.sidebar:
15     st.image("logo.png", use_column_width=True)
16     st.write("Simplifies your Moodle📄 Vtop process. Use this to simplify generating PDF's for your Moodle assignments.")
17     st.warning("This app is still in development. Please report any bugs or issues.")
18     st.write("Follow me on Instagram [@adarsh.py](https://www.instagram.com/adarsh.py/)!")
19     st.info("Contribute here! [GitHub](https://github.com/adarshx/PDFMaker)")
20     st.info("[Compress](https://www.ilovepdf.com/compress_pdf) your generated pdf's here!", icon="🗑️")
21
22     st.write("")
23
24
25 st.title('Code Submission')
26
27 name = st.text_input('Enter your name')
28 reg_num = st.text_input('Enter your registration number')
```
